## خلاصه مقاله:

one of the best method of well stimulation and flow improvement is acidizing. It will reduce skin and damage effects. Acidizing also increases rock permeability and rate of production. But in order to evaluate a a acidizing job some factors such as productivity index , skin pressure drop around the bore and flow can be compare before and after stimulation job. this paper compare specifications of 9 wells in asmari formation of marun oil field before and after acidizing jobs by pansystem software

## کلمات کلیدی:

acidizing, productivity index , pressure drop , rate of production , skin factor
