## خلاصه مقاله:

Use of Light in Architecture and Civilization Due to its unlimited source, without cost, easy accessibility, it has been much appreciated. Exterior lighting can give different effects to buildings. Light is the first condition for any kind of visual perception. As two indivisible elements, lighting and architecture always come together. Lighting for architecture has a patronizing role that makes what architects intend to showcase to the public. Also, indoor spaces can also be used to determine the nature of each section. In this paper, the use of light and its effects on buildings and its psychological effects on users are discussed

## کلمات کلیدی:

.Light, Architecture, Interior, Exterior
