خلاصه مقاله:

Enterprise resource planning (ERP) implementation solves business problems. Effective, efficient implementations can bring a customer millions of dollars in returns, improve implementation consultancies' profit margins. The study reported in this paper aims to identify, assess and suggest improvements to ERP implementations and post implementation shortcomings. The study also indicates a strong need for change in the management structure provided by vendors in order to successfully implement the ERP system. In contrast change management techniques applied are more crucial to potential ERP failures and can have long term implications for the success of ERP
