خلاصه مقاله:

Among specimens collected from some parts of East Azerbaijan and West Azerbaijan provinces, Iran, during 2017-2019, nine species of the genera *Coniosternum* Becker, 1894; *Cordilura* Fallén, 1810; *Gimnomera* Rondani, 1866 and *Scathophaga* Meigen, 1803 were identified. Three species of *Gimnomera dorsata* (Zetterstedt, 1838), *Scathophaga inquinata* (Meigen, 1826), and *Scathophaga islandica* (Becker, 1894), are reported as new records of the Iranian insect fauna. A key to the studied species, along with their diagnostic characters, geographical distribution, supplementary figures, and an updated checklist of the Iranian Scathophagidae, are given.

کلمات کلیدی:

Scathophagidae, dung flies, new records, Iran
