خلاصه مقاله:

Today, one of the problems of project-oriented organizations is the creation of a knowledge management system. This research examines the challenges of knowledge management in the Bahrenko Group of Institutions as a project-oriented organization. First, the literature of the subject was reviewed, then similar researches in Iran and abroad and their results were collected, and then the method of this research, which is a process of hierarchical analysis, was presented. In the end, it is suggested to the project management office of Baharenekoo Group of Institutions to design a system to facilitate access to two important types of knowledge, knowledge about contacts and knowledge about who knows what

کلمات کلیدی:

Knowledge management, Project-oriented organization, Baharenekoo
